

Lizzie Muskie

This photo of a 55 inch muskie, washed up on a Lake Lizzie shoreline demonstrates the downstream and upstream range (up to 100 miles) of muskie, once they are stocked in a lake on a river chain. Lake Lizzie fisherman and residents report many of the same concerns as Pelican, and are joining (along with other OTC lakes) our stand against any more stocking of muskie until the MNDNR can show the impact of the new 55 inch length change, and get support from the lake property owners.
